The old stuff, tangles, pasted them onto letter envelopes, some of which he stacked loose; others he bundled together and secured with rubber bands. He opened the stacks and bundles and examined them at regular intervals. Some of the labels curled up and detached themselves after twenty-six hours without leaving any conspicuous trace. He made up another batch of these, typed his home address on six of them. On each of six envelopes he typed his office address, then covered it with one of the labels. He stamped the envelopes and dropped them into a mailbox. All six, minus their labels, were delivered to the office three days later... usually found in the Mediterranean races. His hair wasn't quite black. It wasn't exactly long and it wasn't. Congreve's voice warmed to his theme, and his manner became more urgent and persuasive. "Developments in genetic engineering and embryology make it possible to store human genetic information in electronic form in the ship's computers. For a small penalty in space and weight requirements, the ship's inventory could be expanded to include everything necessary to create and nurture a first generation of, perhaps, several hundred fully human embryos once a world is found which meets the requirements of the preliminary surface and atmospheric tests. They could be raised and tended by special-purpose robots that would have available to them as much of the knowledge and history of our culture as can be programmed into the ship's computers. I drive beyond the colstrip pits and into the mountains until the paved highway becomes narrow asphalt and then rutted earth and then only a trace, and the car can go no further.
